

# Paul Sajo

## Full stack developer

## About

I am Paul Sajo, the creator and founder of Peckwoods , a Social networking platform, currently pursuing my B.tech in Computer Science and Engineering at Christ University, Bangalore, India.

I am highly motivated research oriented senior developer. I also have authored many open-source libraries and tutorials. Besides programming I also have also done quite a bit of 3d modeling using Blender, illustrations using Inkscape and image editing using Gimp.

I always prefer to work on new and something that I have not worked with before. I usually work alone, but when I am assigned a team I prefer to work in small group of highly motivated people. I am also a believer of "Too many cooks spoil the broth".

## Work experience

- Designed database, UI, Frontend, backend and served as administrator for a social media network that I created called Peckwoods.
- Created Visual scripting tool called Python Designer to help developers quickly create classes in python.
- Helped clients on Fiverr with their business.
- Authored Open source libraries such as PyCollision, tkTimePicker, tkVideoPlayer, tkStyleSheet etc.
- Wrote tutorials on PyQt framework, and deploying web app to AWS
- Worked as an intern at OptiSol Business Solutions.
- Helped business in Stackoverflow community.

## Projects

### Peckwoods

<https://peckwoods.com>

1 Nov 2021 - 30 Feb 2022

Peckwoods is a social networking platform where users share their ideas, opinions and thoughts through what's known as peck. Peckwoods also allows users to join an existing community such as Bikes, Music, Food etc, or even create a new community and take the community and its members forward. Additionally, users (a.k.a peckers) can send private messages to get in touch with another pecker.

Read more about Peckwoods in its about page:  
<https://peckwoods.pythonanywhere.com/home/#about>

### Python designer

<https://github.com/PaulleDemon/PythonDesigner>

1 MAR 2021 - 15 APR 2021

Python designer is a visual scripting tool that enables python developers to quickly create class templates quickly.

### tkVideoPlayer

<https://github.com/PaulleDemon/tkVideoPlayer>

10 OCT 2021 - 13 OCT 2021

tkVideoPlayer is an open-source video player made for tkinter framework.

Due to space limitation I'll be directly linking my GitHub where you can find all my open-source projects, including games that I made:  
<https://github.com/PaulleDemon>

You can also visit my 3d modelling works from artstation:
